Press Release on December 30, 2022

HKPORI releases and wraps up GGPI

Abstract

On April 21, 2020, HKPORI started the coronavirus related epidemic index studies, with “Post-Epidemic Work Resumption Index (PEWRI, 疫後復工指數)” as the pilot study. After that, HKPORI officially launched an index called “Group Gathering Prohibition Index (GGPI, 限聚指數)” to study people’s latest acceptance of the “Group Gathering Ban 限聚令” on a daily basis. Since the Hong Kong government has officially announced that all social distancing measures were lifted from December 29, 2022, HKPORI decided to stop the operation of GGPI on the same day, while the last day of data collection was December 28, 2022 (Wednesday), the last effective day of “Group Gathering Ban”. The operation of GGPI lasted 728 days, including 25 benchmark surveys and 178 press releases of GGPI. HKPORI President and Chief Executive Officer Robert Chung observed, “Since we started our epidemic index studies in April 2020, we have noticed the almost-zero implication of our findings on government policies. Nevertheless, we have continued to conduct our study in the most responsible and scientific way up to this date. Over the years, we found that Hong Kong people’s acceptance level of social gathering bans generally covariates with the number of infected cases, but it always falls way below the existing bans. For example, on the day before such bans were completely lifted, people generally accepted a ban of 17 people, but the government ban stayed at 12, so 83% of the people considered it too strict. Due to such a perception gap, as well as the insensitivity and non-responsiveness of the government to these figures, government popularity has remained low. Now that all social gathering bans have been lifted, but mask wearing remains mandatory, it would be interesting to see how government popularity would change.”

History and Research Background

As the coronavirus epidemic of Hong Kong started in January 2020 and the first wave of epidemic subsided in April 2020, people began to discuss under what conditions should our daily lives resume normal, with the focus first fell on one’s work life then extended to non-work life in the personal, family, community and societal domains. On April 21, 2020, HKPORI started the coronavirus related epidemic index studies, with “Post-Epidemic Work Resumption Index (PEWRI, 疫後復工指數)” as the pilot study. While it may be the government’s responsibility to decide what policies to take in helping the society recover after the epidemic, HKPORI considers it important to gauge people’s views in this aspect in a timely manner to facilitate rational deliberations in the society based on scientific evidence, thus it initiated this epidemic index study. After experimenting with a pilot design and collecting data continuously for almost a year, HKPORI has developed three more indexes with more sophisticated designs. They are grouped under the generic name of “Post-Epidemic Normality Resumption Indexes (PENRI, 疫後復常指數)”. On April 7, 2021, HKPORI officially launched an index called “Group Gathering Prohibition Index (GGPI, 限聚指數)”, which aimed to indicate people’s latest acceptance level of the “Group Gathering Ban” on a daily basis based on their acceptance level of various prohibition limits.

Since the Hong Kong government has officially announced that all social distancing measures were lifted from December 29, 2022, HKPORI decided to stop the operation of GGPI on the same day, while the last day of data collection was December 28, 2022 (Wednesday), the last effective day of “Group Gathering Ban”. The operation of GGPI lasted 728 days, including 25 benchmark surveys and 178 press releases of GGPI. The historical mission is accomplished, however, it does not imply that HKPORI will stop all epidemic-related tracking surveys, such as people’s satisfaction towards government’s performance in epidemic measures and assessment on opportunity of one’s being infected. These surveys will be conducted irregularly, while the number of surveys and the frequency are to be confirmed.

Methodology

The pilot scheme of PENRI is first conducted in April 2020 with only 3 survey questions. Along with the development of the group gathering ban, HKPORI sees the need to revise its survey questions in order to better interpret the figures and to understand the public’s view under the current policy framework. Besides asking about people’s views on completely lifting the group gathering ban, HKPORI added a new set of survey questions which probed in more details, including people’s acceptable prohibition limit based on the number of confirmed COVID cases. The survey questions and design for each stage are summarized as follows:

GGPI Survey Questions	Survey Design
<p>What do you think is the appropriate timing to completely lift the regulation prohibiting gatherings of more than a specific number of people in public places under the pandemic? (Please select the closest answer; If there is no suitable answer at all, please select “don’t know / hard to say”).</p> <ul style="list-style-type: none"> <input type="radio"/> Should completely lift the regulation prohibiting gatherings of more than a specific number of people in public places unconditionally <input type="radio"/> Number of recovered cases exceeds newly confirmed cases each day <input type="radio"/> Number of newly confirmed cases each day falls to a single digit <input type="radio"/> No more newly confirmed local case <input type="radio"/> No more newly confirmed local or imported case <input type="radio"/> No more newly confirmed local case in L consecutive days (Please input L in the next page) <input type="radio"/> No more newly confirmed local and imported case in N consecutive days (Please input N in the next page) <input type="radio"/> Don’t know / hard to say 	<p>Started from Pilot scheme of PERNI in April 2020, until January 2021</p>
<p>How many consecutive days (the value of L mentioned before) with no more newly confirmed local case do you think there should be before it is appropriate to completely lift the regulation prohibiting gatherings of more than a specific number of people in public places?</p> <p>_____</p>	<p>Started from Pilot scheme of PERNI in April 2020, until January 2021</p>
<p>How many consecutive days (the value of N mentioned before) with no more newly confirmed local and imported case do you think there should be before it is appropriate to completely lift the regulation prohibiting gatherings of more than a specific number of people in public places?</p> <p>_____</p>	<p>Started from Pilot scheme of PERNI in April 2020, until January 2021</p>

<p>Do you think the regulation prohibiting gatherings of more than a specific number of people in public places should be completely lifted unconditionally in Hong Kong?</p> <p><input type="radio"/> Yes, the ban should be lifted unconditionally → Skip questions related to this regulation</p> <p><input type="radio"/> No, it should depend on the epidemic situation</p> <p><input type="radio"/> Don't know / hard to say</p>	<p>Since January 2021</p>
<p>How many newly confirmed cases each day should there be before it would be appropriate to prohibit gatherings of more than 2 people? [The pandemic should be at its worst; For reference, there are 9 newly confirmed cases on March 25, 2021] (To opt for "don't know / hard to say", please input 99999)</p> <p>_____</p>	<p>Since January 2021</p>
<p>How many newly confirmed cases each day should there be before it would be appropriate to prohibit gatherings of more than 4 people? [The number of newly confirmed cases should be fewer than that in the previous question] (To opt for "don't know / hard to say", please input 99999)</p> <p>_____</p>	<p>Since January 2021</p>
<p>How many newly confirmed cases each day should there be before it would be appropriate to prohibit gatherings of more than 8 people? [The number of newly confirmed cases should be fewer than that in the previous question] (To opt for "don't know / hard to say", please input 99999)</p> <p>_____</p>	<p>Since January 2021</p>
<p>How many newly confirmed cases each day should there be before it would be appropriate to prohibit gatherings of more than 12 people? [The number of newly confirmed cases should be fewer than that in the previous question] (To opt for "don't know / hard to say", please input 99999)</p> <p>_____</p>	<p>Added in October 2021, due to the latest prohibition limit by the government</p>
<p>How many newly confirmed cases each day should there be before it would be appropriate to prohibit gatherings of more than 16 people? [The number of newly confirmed cases should be fewer than that in the previous question] (To opt for "don't know / hard to say", please input 99999)</p> <p>_____</p>	<p>Since January 2021</p>
<p>After how many days of zero infection do you think the group gathering ban should be lifted altogether?</p> <p>_____</p>	<p>Since January 2021</p>
<p>Please list combinations of [number of cases & number of people allowed in gatherings] that you think is appropriate in the field below:</p> <p>_____</p>	<p>Since January 2021</p>

After collecting the data, HKPORI would make reference to the daily confirmed COVID cases and check on how many respondents would find the current gathering ban policy too lenient, appropriate or too strict. If the acceptable prohibition limits are lower than the current ban, they are categorized as “too lenient”. On the other hand, if the prohibition limits are higher than the current ban, they would be grouped as “too strict”. If the prohibition limit matches the current policy, it would be considered as “appropriate”. Besides, HKPORI would also calculate GGPI with 20 people as the maximum limit of lifting Group Gathering Ban, in order to reflect the GGP acceptance level of the people according to the number of infected cases.

After several months of testing, HKPORI confirmed that people’s views on the “Group Gathering Ban” will not change rapidly. Therefore, HKPORI decided to conduct a benchmark survey once a month or only when there is a change in the policies, and the daily indices can simply be found in the reference table of the latest benchmark survey, by checking the daily figures of confirmed cases. When a new benchmark survey is completed, the reference table will be updated, and the new index and acceptance level can be checked in the new benchmark survey reference table.

Research Summary

Overall, the pattern of GGP acceptance level among citizens was roughly the same as the number of infected cases. When the number of infected cases stood at a high point, the GGP was more acceptable among the citizens. When the number of infected cases dropped, the GGP acceptance level among citizens also declined. When the fourth wave of the epidemic ended at the end of May 2021, only 3% of citizens believed that the GGP was not too strict, while the remaining 97% of respondents believed that the GGP was too strict. From June 2021 to the end of 2021, 60% of the citizens continuously believed the GGP was too strict and they accepted 16 as the number of people allowed in a gathering. After that, as the fifth wave of the epidemic broke out, people gradually accepted the GGP. In February 2022, around half of the citizens thought that the GGP of 2 people at that time was appropriate. Later, as the epidemic subsided again in the second half of 2022, more people believed that GGP should be lifted, with an average of 70% of people. Starting from the end of October, although the GGP was relaxed by the government and the number of infected cases was increasing, more than 70% of the people could not accept GGP, while the expected number of people allowed in gather increased from 13 in the first half of 2022 to 17, indicating the people’s expectation of continual relaxation of the GGP. It is worth noting that since the calculation of GGP acceptance level only started in January 2021, the data for the fourth wave of the epidemic only covers the figures starting January 2021.

Response rate	:	5.6%	5.7%	4.5%	5.7%	5.3%
Survey method	:	Online survey				
Target population	:	Hong Kong residents aged 12+				
Sampling error ^[1]	:	Sampling error of percentages at +/-1% at 95% confidence level				
Weighting method	:	Rim-weighted according to 1) gender-age distribution, educational attainment (highest level attended) distribution and economic activity status distribution of Hong Kong population from Census and Statistics Department; 2) appraisal of political condition and political inclination distribution from regular tracking surveys.				

[1] All error figures in this release are calculated at 95% confidence level. “95% confidence level” means that if we were to repeat a certain survey 100 times with different random samples, we would expect 95 times having the population parameter within the respective error margins calculated. Because of sampling errors, when quoting percentages, journalists should refrain from reporting decimal places, whereas one decimal place can be used when quoting rating figures.

Latest Findings

The last released GGPI is 17.0, with 83% of the people believed that the current GGP is too strict.

Commentary

HKPORI President and Chief Executive Officer Robert Chung observed, “Since we started our epidemic index studies in April 2020, we have noticed the almost-zero implication of our findings on government policies. Nevertheless, we have continued to conduct our study in the most responsible and scientific way up to this date, because we consider it important to document public sentiment scientifically, even if our audience is not this generation. Over the years, we found that Hong Kong people’s acceptance level of social gathering bans generally covariates with the number of infected cases, but it always falls way below the existing bans. For example, on the day before such bans were completely lifted, people generally accepted a ban of 17 people, but the government ban stayed at 12, so 83% of the people considered it too strict. Due to such a perception gap, as well as the insensitivity and non-responsiveness of the government to these figures, government popularity has remained low. Now that all social gathering bans have been lifted, but mask wearing remains mandatory, it would be interesting to see how government popularity would change.”

Note: Dr Robert Chung is prepared to answer any public enquiry by email at enquiry@pori.hk, he would not accept any audio-visual interview.
